PR KUT 3

Area = 
$$\Pi R(x)^2 = \Pi \cdot X^4$$
  
Volume =  $\int_0^2 A \operatorname{rea} dx = \frac{1}{5} \times \int_0^2 = \frac{1}{5$ 

Volume = 
$$\int_{1}^{2} A \operatorname{ren} dx = \int_{1}^{2} \pi \cdot x^{4} dx$$

=  $\pi \left[ \frac{1}{5} x^{5} \right]_{0}^{2} = \frac{32\pi}{5}$ 

Tentukan panjang kuna
$$y = \frac{1}{2} \left( e^{x} + e^{-x} \right)$$

$$0 \le x \le 2$$

$$\int_{0}^{2} \int_{1}^{2} \left( \frac{dy}{dx} \right)^{2} dx$$

= 
$$\int_{0}^{2} \left(1 + \frac{1}{2} \left(\frac{d(e^{x} + e^{-x})^{2}}{dx}\right)^{\frac{1}{2}} dx$$
  
=  $\int_{0}^{2} \left(1 + \frac{1}{2} \left(e^{x} - e^{x}\right)^{2}\right)^{\frac{1}{2}} dx$   
=  $\int_{0}^{2} \left(1 + \frac{1}{2} \left(e^{x} - 2 + e^{-2x}\right)^{\frac{1}{2}} dx$   
Tenfukan gaya deh air pada salah satu plat senjingan sara kan sara kebar left herbentuk lemba. Alusnya ke atus dan simpulnya banda di hit

 $\int \int \int \frac{1}{2} \left( \frac{d(e^{x} + e^{-x})}{dx} \right)^{2} dx$ 

Schnish Manya barada 
$$2ft$$
 dbarah permukaan talam renary.

$$F = V \int_{a}^{b} (Stip depth) L(Y) dy$$

$$= W \int_{a}^{2} 2 - 6 \times dx$$

$$= 2 \text{ W} \left[ \frac{3}{3} \times \frac{3}{3} \right]_{0}^{2}$$

$$= 2 \text{ W} \left[ \frac{3}{2} \times \frac{2}{3} \right]_{0}^{2}$$

$$= 2 \text{ W} \left( \frac{12}{3} \right) = 2 \text{ W} \text{ W}$$
